ORDNANCE OFFICE, U. S. Navy Yard,
Washington, October 10th, 1853.

Sir,—The Honourable Secretary of the Navy, has given me permission to respond to your printed circular, by contributing a sample of the manufacture of this department of the Navy.

It is one of the Howitzers now issued to the ships of the United States for service in boat expeditions. You will no doubt observe at once, that no attempt has been made to finish the work, beyond that which is actually required to fit the several parts correctly. It is submitted as a fair representation of the article manufactured for actual service, and will be transferred to the U. S. Ship Independence of sixty guns, now preparing for sea, at New York, when your Exhibition closes.

The gun and its appliances, are, strictly speaking, the fabric of this yard; the iron of the carriage is made up of scraps fagoted under a heavy steam hammer, and then forged by hand in the blacksmith department.

The copper combined in this piece itself, is composed of worn out sheathing copper from the bottoms of U. States Ships, refined, run into cakes, and afterwards combined with tin in a reverberatory. Still, I frequently use copper from the Cliff Mines of Lake Superior, which is preferable, being much stronger than foreign copper.

The specific gravity and tensile strength of the proof samples from the rough casting, are as follows :—

		Per Sq. Inch.
Cascabel	= 8798	.49829
Head (near the muzzle,)	No. 1 = 8631	·33009
	No. 2 = 8669	·33639
	No. 3 = 8650	·34425

The carriages are fitted and finished, and the guns made in the ordnance department.

The system of boat armament now adopted, may possess some interest with my townsmen as it is my own, including the form of the piece, the design of both carriages, and their general application to both field and boat

purposes. Before these were introdueed, our Navy had nothing of the kind exeept a few old iron Carronades, and in the war with Mexieo, some field guns of the army pattern whieh were entirely unsuitable for Naval purposes.

There are now in serviee 70 of the pieees of whieh you have a sample; 12 are in the Japan Expedition, 16 in the North Paeific Surveying Squadron, and the remainder seattered in the other Squadrons on foreign serviee.

I transmit you also for the Library of the Franklin Institute, three Memoranda, printed by order of the Bureau of Ordnanee, one of whieh will explain more fully the general uses for whieh artillery of this deseription is intended.

I remain, Sir, most respeetfully,

Your obedient servant,

JOHN A. DAHLGREN.

Mr. John E. Addicks,

Chairman of Committee on Exhibition, Franklin Institute, Phila.

HIGHLY APPROVED

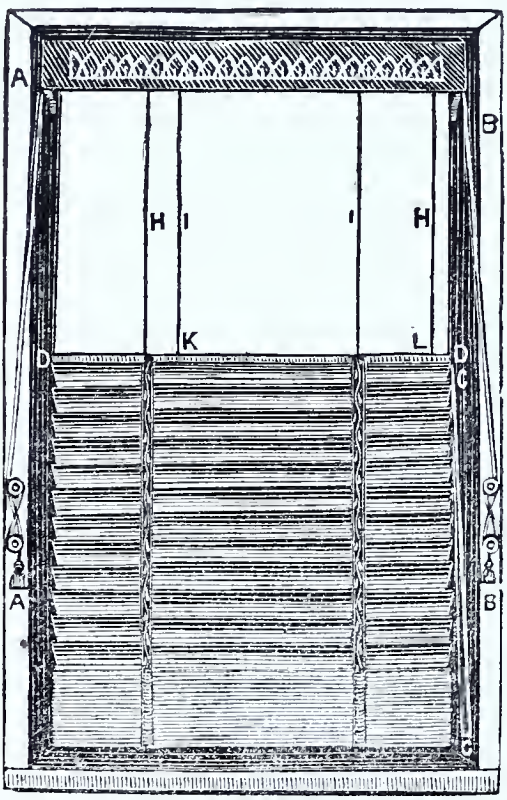
PATENT SUSPENDING BLIND,

MANUFACTURED AND SOLD AT

No. 2½ South Eighth St., below Market,

PHILADELPHIA.

Fig. 2



Patented June 4th, 1850.

This Blind is the greatest combination of novelty and utility ever offered to the public by the trade. It not only saves an immense amount of labour, (one of the greatest objections with the Ladies to ordinary Blinds,)but actually saves the wear and tear of a Blind from 20 to 30 per cent. For ventilating purposes there are none such, as a single glance at Fig. 2 will convince any one. For the purpose of admitting light from the top, this Blind supersedes any ever offered for that purpose, it being constructed in such a manner as to clear entirely, not partially, the upper part of the window. Dentists, Doctors, Lawyers and others who require light from the top, are respectfully invited to call and examine for themselves. Blind Makers and the public in general are requested to call and see this improvement.

MR. F. FORD:

Dear Sir,—We take great pleasure in stating to the public that your Patent Venitian Blinds furnished by you for our stores are, in our opinion, superior to any thing of the kind we have ever seen, and a great and very desirable improvement upon every other blind in use. They are, certainly, every thing that can be desired in a blind, and we cheerfully recommend them to merchants and the public, confident that when their merits become known, they will be brought into universal use.

(Granted Dec. 14, 1852.)

H. VIVIAN & Co.,

SOLE MANUFACTURERS,

Ross St., above Queen, Kensington,

PHILADELPHIA.

This Pump is acknowledged by scientific men, who have witnessed its operation, to possess many advantages over all other Lifting Pumps now in use, and to be one of the most valuable inventions of the day.

It can be used in manufacturing establishments, where large quantities of water are required, to great advantage; and as a Ship's Pump it is highly valuable. For Town and Country purposes it is unequalled, being applicable to wells of any depth, and yields a steady and constant supply of water with a slow, as well as rapid, motion, whilst its simplicity of construction, durability and cheapness, must render it the favourite Pump of the Union.
